1. The first step is to identify the problem. This involves understanding the current situation and what needs to be changed.

AFOSR 65-0042
ARL 65-1087

1. The first step in the process of developing a research project is to identify a topic of interest. This is often done by reviewing the literature in the field and identifying gaps in knowledge.

2. Once a topic has been identified, the next step is to formulate a research question. This question should be specific, measurable, and researchable.

3. The third step is to develop a hypothesis. A hypothesis is a statement that predicts the outcome of the study. It should be testable and based on theory or previous research.

4. The fourth step is to design the study. This involves deciding on the methods to be used, the sample size, and the data collection procedures.

5. The fifth step is to collect data. This is done by following the procedures outlined in the study design.

6. The sixth step is to analyze the data. This involves using statistical methods to test the hypothesis and draw conclusions from the data.

7. The final step is to write the report. This is a document that describes the research process, the results, and the conclusions.

1. The effect of the concentration of the solvent on the rate of the reaction was studied. The results are shown in Table I. The rate of the reaction increases with increasing concentration of the solvent. The rate of the reaction is also affected by the concentration of the reactants. The rate of the reaction is also affected by the temperature. The rate of the reaction is also affected by the presence of a catalyst.

| 13. ABSTRACT

This <u>Index</u> is designed to identify all scientific and technical reports published by the various OAR subordinate units during 1967-1968, as well as the results of research sponsored by OAR at the AFSC laboratories during this same period. It is also intended to furnish a ready reference for the identification of technical reports produced under certain contracts, grants or projects.

The publication includes a Bibliography (Section I) of research results organized into subsections and cross referenced by a Corporate-Author Index, an Author Index, a Contract/Grant-Number Index, a Project-Number Index, an AD-Number Index, and a KWIC (Keyword-in-Context)-Type Subject Index (Sections II-VII).

In addition, there are three Appendices to assist the user to reference pertinent reports to the relevant Air Force R&D organizations and projects. | | | |
